RECHARGEABLE Ni-Cd PUMP

IMPORTANT: PUMP MUST BE CHARGED FOR 24 HOURS PRIOR TO THE FIRST INFLATION. Use the AC adapter to charge your new Aero pump for 24 hours. For maximum performance, be sure to fully discharge pump before recharging. After initial charge and use, charge pump for 12 HOURS at a time. Charging your pump for periods shorter or longer than 12 hours will substantially decrease the life of your Ni-Cd pump. In an emergency, a 3 hour charge will provide one inflation, however, continued charging for 3 hour periods will substantially decrease the life of your Ni-Cd pump.

IMPORTANT: ALWAYS store pump and charger in a cool, dry place. DO NOT allow pump or charger to get wet. Allowing pump and/or charger to get wet will void your warranty.

TO CHARGE / RECHARGE:

- a) First, remove pump and charger from protective plastic shipping wraps.
- b) Insert the charger's mini-plug in the hole.
- c) Third, plug the charger unit into any standard 110V (or 220V depending on your local service) electrical outlet and let it charge for 12 hours (24 hours on initial charge).

NOTE: For best pump performance, you must completely drain the charge from your pump prior to recharging. For directions, see discharge section below. Prior To Inflation:

- a) Unplug the pump after it has been charged for 12 hours (24 hours on initial charge).
- b) Remove charger unit from the electrical outlet.

NOTE: Pump will not run while charger is plugged into an electrical outlet.

To Discharge:

- a) Place pump on valve as if to inflate product.
- b) Allow pump to run until the pump motor dies down.

NOTE: When properly used, your pump will hold a full charge for approximately 90 days. When storing pump for longer than 90 days, fully discharge and recharge pump every 120 days. This will help maximize pump life.

WARNING: PUMP SHOULD ONLY BE USED WITH AERO ADAPTER PROVIDED. DO NOT USE WITH ANY OTHER ADAPTER.

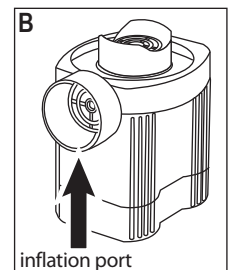

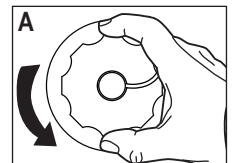

⚠ IMPORTANT: PUMP CONTAINS NICKEL-CADMIUM BATTERIES. BATTERIES MUST BE RECYCLED OR DISPOSED OF PROPERLY.
