INFLATION

Remove your AeroBed Raised from its lightweight duffel bag. Keep bag for storage.

1. Place your rolled-up bed on the floor free of obstructions or sharp objects.
2. Make certain the Quick Air Release Valve located at the foot of the bed is closed.

If the Quick Air Release Valve is open, close it by using 2 thumbs to push cover and snap into valve. Be careful to avoid pushing valve cover to the right or left as it snaps into the valve opening.

This is the closed position.

3. Remove AC plug, cord, and One Touch® Comfort Control Wand from plastic bag and shrink wrap.
4. Plug into any standard polarized 110 Volt AC electrical outlet. North American Electrical rating: 120 VAC 60HZ 1.0A (Note: 230VAC product sold outside of North America.)

This product has a polarized attachment plug (one blade is wider than the other) as a safety feature. This plug will fit into a polarized outlet only one way. If the plug does not fit fully in the outlet, reverse the plug. If it still does not fit, contact a qualified electrician. Never use with an extension cord unless the plug can be fully inserted. Do not attempt to defeat this safety feature.

5. Push and hold inflation/firmer button on the One Touch® Comfort Control Wand for approximately 3 minutes to inflate your AeroBed Raised to the full (firmest) capacity. Bed will not over-inflate.
6. Lie on the bed and use Comfort Control Wand to adjust the firmness to your desired level. For firmer bed, press inflate/firmer button. For softer bed, press deflate/softer button.

CAUTION: Do not sleep on edges of the bed. Edges are less supportive and may crush under weight.

DEFLATION AND STORAGE

1. Make sure the bed is unplugged from the electrical outlet prior to deflation.
2. To deflate your AeroBed Raised, open the Quick Air Release Valve at the foot of the bed. Deflation takes approximately 1 minute.
3. Roll or fold the AC cord with wand control and secure it. Fold sides of bed into the center along its length. Tightly roll your AeroBed Raised around the pump towards the air release end. When the bed is completely rolled, push the Air Release Valve closed until it locks.
4. Store your AeroBed Raised in a clean, dry place at room temperature (above 50°F/10°C). Storing your AeroBed under 50°F (10°C) and over 100°F (38°C) may affect its performance and will not be covered under warranty.

NOTE: Bed must be at room temperature prior to inflating or it may cause air leaks.

CARE AND MAINTENANCE

1. Inspect your AeroBed Raised prior to each use.
2. Keep your AeroBed Raised away from any sharp objects. Large cuts or snags may not be repairable and will not be covered by your warranty.
3. When not in use, store your AeroBed Raised in a clean, dry place out of extreme temperatures. Product must be at room temperature prior to inflating.
4. In case of incidental damage to your bed, a repair patch has been included. Please follow repair instructions carefully.

CLEANING

We recommend that you do not let the plush surface of your AeroBed Raised get wet. Repeated exposure to water or other liquids may cause damage to the plush surface that will not be covered by your warranty. Should liquid come in contact with the plush surface, blot liquid dry and use a damp cloth to remove any stain. Let surface air dry completely. You may clean the PVC on the sides and bottom of your bed with a mild dishwashing detergent or household cleaner. Do not use strong chemicals or other compounds. Allow your bed to air dry completely after cleaning and before storing.
